

Alvaro Raditya Soewardono

Automotive and Robotics Engineer

ABOUT ME

A Robotics Engineer specializing in UAVs, embedded systems, and computer vision. Experienced in designing ROS 2-based control nodes, integrating with ArduPilot, and optimizing real-time deep learning models (YOLO) on edge hardware.

SKILLS

Robotics & Control
ROS2, MAVSDK, ArduPilot, PX4, Control Systems, Autonomous Navigation

Computer Vision & AI
OpenCV, YOLO, Pose Estimation, Object Detection, Edge Inference

Programming & Systems
C++, Java, Go, PHP, Python, Ubuntu, Git, Bash, Docker, Networking

WORK EXPERIENCE

AeroBASE
Head of Software Division
Feb 2025 - Present

- Built a ROS2 and MAVSDK offboard system for KRTI 2026 competition.
- Optimized real-time YOLO object detection while keeping mAP 98%+.
- Engineered vision-based navigation using pose estimates for sub-5 cm precision.
- Developed the landing website using modern frameworks such as Astro.

Lucky Network
Chief Security Officer
Feb 2021 - Present

- Architected a Java-based server management service to streamline deployment workflows.
- Developed a gRPC authentication system protecting data for over 1000 players.
- Integrated a payment gateway and player donation platform, processing over 100+ payments.

EDUCATION

BINUS University
Automotive and Robotics Engineering
2024 – Present • GPA: 3.89
